Pythios Artifact Showcase

Overview

The Pythios Artifact Showcase demonstrates multi-format artifact generation from a single coherent product concept. Eight artifacts are produced across text, structured data, document, spreadsheet, presentation, image, and video formats—all sharing consistent naming, terminology, and visual language.

Artifact Inventory

The showcase includes: showcase.md (Markdown overview and manifest), showcase.json (structured metadata), showcase.docx (formal document), showcase.pdf (this portable document), showcase.xlsx (tabular inventory), showcase.pptx (presentation deck), showcase.png (AI-generated illustration), and showcase.mp4 (AI-generated motion concept). Each artifact serves a distinct purpose while maintaining cross-format coherence.
